## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 25-33 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 03/004558 in view of either Hildebrand US 5,063,262 or Miyata et al. US 4,751,261.

4. WO 03/0044558 teaches stabilizer compositions used in PVC. The claimed perfluoroalkyl sulphonate salt is extensively disclosed. Further, the use of the sulphonate salt in combination with nitrogen containing stabilizers is discussed at pages 6+. The difference between this document and the claimed invention is that the document fails to identify the N,N"-diphenylthiourea species of nitrogen containing co-stabilizer. The N,N"-diphenylthiourea is a well known co-stabilizer for PVC resin composition. The Miyata and Hildebrand patents each show the N,N"-diphenylthiourea

as a co-stabilizer in PVC compositions, see Hildebrand at column 6 lines 45-50 and Miyata at column 6 lines 43-50. One of ordinary skill would be motivated to select the N,N"-diphenylthiourea co-stabilizer from the list of conventional co-stabilizers. It would be prima facie obvious to use the N,N"-diphenylthiourea of the secondary references in the stabilizing compositions of the WO 03/004558 given the reasonable expectation of success when combination of stabilizers is utilized.

5. There are no results of record that compare the closest prior art with the instantly claimed invention.

#### ***Election/Restrictions***

6. Applicant's election with traverse of N,N"-diphenylthiourea in the reply filed on 12/2/08 is acknowledged. The traversal is on the ground(s) that the species contain corresponding technical features and a search for one of the species requires search for all species. This is not found persuasive because the fields of search for the various species are divergent and does not overlap as alleged.

7. The requirement is still deemed proper and is therefore made FINAL.
